

Dear Valued Patient,

Thank you for being a valued patient of **Dr. Neil Haraway** at **Mississippi Urology Clinic**. We are dedicated to providing outstanding clinical care and want to ensure that our patients are aware of the latest treatment options available. You may be a candidate for these treatment options if you have any of the following symptoms:

- Frequent or uncontrollable urges to go to the bathroom
- Leaking urine before you reach the bathroom
- Leaking urine during normal daily activities like coughing, sneezing, or during a physical activity
- Difficulty fully emptying your bladder
- Inability to control your bowel movements

We Now Offer Advanced Incontinence Treatments to Help You Regain Bladder and Bowel Control

Axonics Therapy is an advanced treatment option that provides gentle stimulation to the nerves that control the bladder and bowel. This stimulation can help restore normal control of the bladder and bowel, resulting in symptom improvement for overactive bladder or fecal incontinence. This therapy offers the following benefits:

- Clinically proven to regain bladder and bowel control, with 94% of patients satisfied with Axonics Therapy¹
- The potential for long-term symptom relief—designed to provide therapy for a minimum of 15 years
- Improved access to MRI, including full-body MRI scans

Bulkamid is a long-lasting, minimally invasive treatment for women suffering from stress urinary incontinence, a condition where leaks occur during daily activities such as laughing, coughing, or exercising. This treatment offers the following benefits:

- Minimally invasive treatment with no incisions, just a series of small injections
- Clinically proven to deliver symptom relief, with 92% of women reporting improvements in symptoms²
- Long-lasting treatment, proven to maintain its efficacy for 7 years²

If you are interested in speaking with the physician to see if either of these treatments is right for you, **please call our office at (601) 353-9900 to schedule your consultation appointment.**
